

MARS HAS HIT A HOMERUN!!

When complete in the Spring 2012, this state-of-the-art Major League Ballpark will encompass 966,929 SF and feature 36,600 seats with a three panel operable roof system that will cover the playing field and seating terraces. The \$450 million sporting venue, which will serve as home to the Florida Marlins, will be situated at the former site of the Orange Bowl in downtown Miami.

Designed in an open ballpark configuration, the operable roof panels will rise over a grand plaza, creating an entertainment entry district. When the roof and outfield wall are retracted, the interior space will transform and the seating terraces become open to the sky.

As a partner of the construction management team HUNT/MOSS/MARS, Mars is working closely with the owner, designers, consultants throughout the preconstruction planning phases to ensure all budget, schedule and logistics requirements are addressed prior to commencing work in the field.
